EDUCATION

Alva's Institute of Engineering and Technology, Moodbidri	2025
Bachelor of Computer Science and Engineering	CGPA:9.18
Ambika PU College, Puttur	2021
Pre-university course (PCMB)	Percentage:85.17
Priyadarshini English Medium School, Bettampady	2019
Secondary School Leaving Certificate	Percentage:87.36

INTERNSHIPS

LogicHive Solutions Pvt Ltd	Feb 2025 - May 2025
Research Engineering Trainee	Puttur
- Developed a Python-based web scraping tool using Selenium, Selenium Grid, Celery, and Docker to extract LinkedIn URLs and relevant company information, enabling scalable and efficient data gathering for business intelligence. - Contributed to the design and implementation of an AI-powered in-house video editing platform using React, Flask, and FFmpeg, streamlining core editing workflows with automated video processing features.	
National Remote Sensing Centre, ISRO	May 2024 - Jun 2024
Research Intern	Hyderabad
- Developed a Software to extract the location of death or damage caused by lightning strike and displayed on map. - Worked on Web Crawling, Data Collection, Web Scrapping, Natural Language Processing and Machine Learning. - The Processed Data was Visualized on the map displayed over the webpage using Flask Application.	
Venture Soft-Tech Global	Oct 2023 - Dec 2023
Cloud Engineering Intern	Bangalore
- Gained hands-on experience with cloud platforms including AWS, Azure, and Google Cloud; developed skills in cloud deployment, instance management, and service integration, gaining exposure to professional IT environments. - Built and deployed a local bus-finding application that helps users locate available buses between source and destination; hosted the project on AWS using EC2 for scalable and reliable access.	

PROJECTS

Lightning Strike related Damage location Extraction Model	May 2024
Project Description	
- Developed a model that scrapes e-news articles to extract relevant news about lightning strikes using a Web Scraper and Natural Language Processing (NLP) techniques. - The processed data is stored in an SQLite database. The model extract's locations of lightning incidents and displays them on a map using a Flask web application.	
Trust-Ad: An Innovative Personalized Advertising Model	June 2024
Project Description	
- Developed a model that delivers personalized advertisements based on users' search history while maintaining user privacy. - The system clusters search history data locally on the client side, ensuring that no sensitive information is sent to the server. The client model requests relevant ads, and the server model responds with appropriate advertisements to be displayed to the user using the Flask application.	
Lexi-Act: A Large Action Model	April 2025
Project Description	
- Developing an advanced action model that performs tasks based on user voice commands. - My role includes processing and analyzing voice input using speech recognition techniques, followed by Natural Language Processing (NLP) to interpret the commands. - The processed inputs will guide the design and development of the automation model, which will eventually execute the actions based on the interpreted commands.	

TECHNICAL SKILLS

Languages	Python Java C HTML5 CSS JavaScript SQL
Developer Tools	Vscode Git IDLE PyCharm Collab Eclipse UIPATH XAMPP Docker

CERTIFICATIONS

- Issued Certification in Python Foundation by Infosys Springboard Learning.
- Certified in Learning Cloud Computing: Core Concepts by LinkedIn.
- Issued Certification in RPA Developer Foundation by UI Path.
- Issued Certification in TechA Java Developer by Infosys Springboard Learning
